African ccTLD Workshop " Building Local Internet Community"
Hosted by Egypt's National Telecommunications Authority "NTRA"
28th - 30th May, Movenpic Hotel Al Haram, Media City, Cairo

Objectives of Workshop :
AFTLD workshops main objective is to offer advanced training and exchange of best practices between African Country Code Top Level Domain operators/managers, ISPs and Governments, who are participants in the process of developing and enhancing a national Internet infrastructure and provide assistance in building a strong local internet service by promoting and utilizing country's top level domain .

Goals of the workshop :
The goals of the workshop are :

- To train a critical mass of trainers and professionals in DNS management, networking and services to be able to support an extension of DNS and Internet-related activities within the African countries represented.

- To identify and share individual and institutional best practices and contacts as well as information sources that will assist the process of national internet infrastructure development.

- To build robust African ccTLD/Internet Professional Network between all participants in the programs so that the mentor-student and colleague-colleague relationships formed during the workshop and conferences will remain strong and of continuing usefulness well beyond the workshop and conference.

- To increase the level of co-operation among existing African ccTLD Registries/Operators, Government and Local Internet Community, and share information on projects and activities for establishing public data networks in Africa.

- To train trainers and groups who will return to their country and region and who will train others in DNS and other internet related topic utilizing AfTLD training Package.

Participants:
* ccTLD Registries Administrative and Technical management.
* ISPs
* ICT Intergovernmental Organizations and Government Organisations related to

Internet Services (Regulatory bodies, internet development agencies, national information centres, ..ect)
* DNS Technical Professional.
