PRESS RELEASE

ISERVICES TOGO now Accredited Training Center of ECCOUNCIL.

 February 05 2010 – ISERVICES TOGO, a Computer Engineering company specialized in Network Architecture design and Security solutions, has announced its partnership with ECCOUNCIL at the end of the first Certified Ethical Hacker (CEH) training in Lome - TOGO.

With the growing demand of governments but also businesses in Africa to implement a proactive approach and to give their teams the knowledge and skills necessary to secure their technology assets and to effectively respond to new security threats, ISERVICES held from February 1 to 5 in Lome the first CEH training which involved twenty participants from different countries (Benin, Burkina Faso and Cote d'Ivoire, Togo).

Participants had the opportunity to refresh their knowledge in information security, to learn about the various regulations and laws, the new vulnerabilities and current techniques used by hackers. They have learned to scan, test, enter and secure different systems, but also to implement real security audits.

For Jean-Robert Hountomey, Group CEO of ISERVICES, this step marks the second phase of a set of programs to assist governments, businesses and even individuals in the fight against cybercrime.

ISERVICES has announced at the same time its training program for the first semester of 2010 in which people will have the opportunity to be trained on the following modules in addition to the CEH:

- The Computer hacking forensic investigation (CHFI) which is the process of detecting hacking attacks and properly extracting evidence to report the crime and conduct audits to prevent future attacks. The CHFI course will benefit Police and other law enforcement personnel, Defense and Military personnel, e-Business Security professionals, Systems administrators, Legal professionals, Banking, Insurance and other professionals, Government agencies etc.

-

- The EC-Council's Licensed Penetration Tester (LPT) which is a natural evolution and extended value addition to its series of security related professional certifications. The LPT standardizes the knowledge base for penetration testing professionals by incorporating best practices followed by experienced experts in the field. Unlike a normal security certification, the LPT is a program which trains security professionals to analyze the security posture of a network exhaustively and recommend corrective measures authoritatively. EC-Council's license vouches for their professionalism and expertise thereby making these professionals more sought after by organizations and consulting firms globally

For more information on the agenda and content of modules, contact: iservices@iservices.tg or ISERVICES Sarl Togo +228 2208999 - Fax: +228 2204777.

About EC-Council

The International Council of E-Commerce Consultants (EC-Council) is a member-based organization that certifies individuals in various e-business and information security skills.

EC-Council has trained over 60,000 individuals and certified more than 22,000 members, through more than 450 training partners globally.

These certifications are recognized worldwide and have received endorsements from various government agencies including the US Federal Government via the Montgomery GI Bill, National Security Agency (NSA) and the Committee on National Security Systems (CNSS).

EC-Council is the creator of the Hacker Halted conference and workshop series and has established the EC-Council University based in the state of New Mexico, United States of America which offers both bachelors and masters degree programs.

Currently, EC-Council is supporting the International Multilateral Partnership against Cyber Threats (IMPACT) which is a partnership organization of the United Nations/International Telecommunication Union (UN/ITU) to provide training and technical support to governments of its 191 member states. **http://www.eccouncil.org**
