

A Better Internet, A Better Future

MISSION

Larus Foundation was born with the mission of increasing public's awareness and participation regarding Internet policy making. We understand that the general public's exposure to policy making is limited while some capable and interested candidates who are interested in policy may not have sufficient funds to pursue their further studies. What we aim is to support these two parties:

- (1) By educating the general public
- (2) By providing financial support to people who are interested in pursuing further studies in this field. We hope to give our next generation a better Internet by doing so.

FELLOWSHIP PROGRAMME

The fellowship programme is designed to inspire more people into number policy making and future Internet governing.

Capable candidates will be sponsored to take part in different RIR (Regional Internet Registry)'s meeting and engage in policy discussion so as to help building a better Internet for future generations.
